CONDENSER WATER VALVE ADJUSTMENT

The condenser water valve is factory preset for a condenser water outlet temperature of 95° to 105° F. If actual temperature varies greatly from this, readjust water flow rate at the valve using the following procedures.

1. START UP COMPRESSOR

This can be accomplished by depressing the cooler push button (See Fig. 4 - Item 2). Keep water running during the entire readjustment procedure.

2. ADJUSTMENT CONDENSER WATER VALVE

Adjust valve by rotating adjustment stem. Rotating stem clockwise will decrease water flow. Counterclockwise rotation will increase water flow. Increasing water flow will result in a lower condenser outlet temperature, while decreasing water flow will result in a higher outlet temperature. Proper adjustment is attained when condenser outlet temperature is 95° to 105° F.

FIG. 3

Stream height is factory set at 35 PSI. If supply pressure varies greatly from this, remove items 1 & 2 and adjust screw on item 4. Clockwise adjustment will raise stream and counter-clockwise adjustment will lower stream. For best adjustment, stream should hit basin approximately 6-1/2" (165mm) from bubbler.

FIG. 4

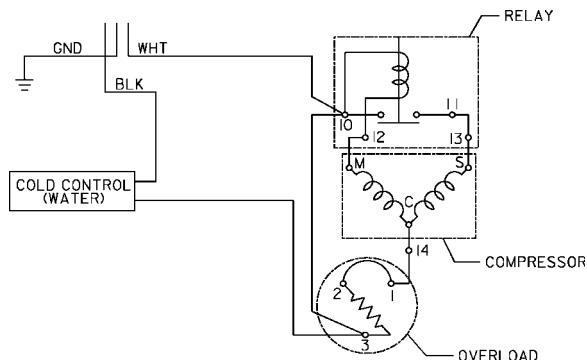

NOTE:
WHEN INSTALLING REPLACEMENT BUBBLER AND PEDESTAL, TIGHTEN NUT (ITEM 12) ONLY TO HOLD PARTS SNUG IN POSITION. DO NOT OVER TIGHTEN.
