# Installation/Care/Use Manual

SwirlFlo® Refrigerated Fountains with FLEXI-GUARD®

# Installer •

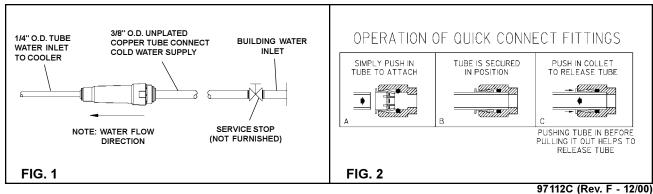

To assure you install this model easily and correctly, PLEASE READ THESE SIMPLE INSTRUCTIONS BEFORE STARTING THE INSTALLATION. CHECK YOUR INSTALLATION FOR COMPLIANCE WITH PLUMBING, ELECTRICAL AND OTHER APPLICABLE CODES. After installation, leave these instructions inside the fountain for future reference.

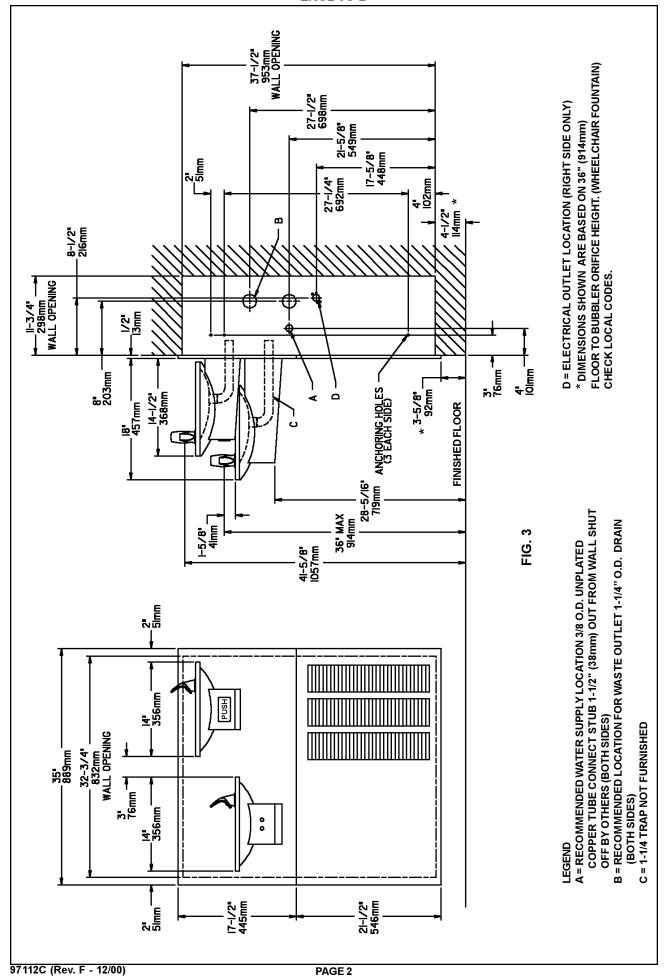

### IMPORTANT

ALL SERVICE TO BE PERFORMED BY AN AUTHORIZED SERVICE PERSON

## IMPORTANT! INSTALLER PLEASE NOTE.

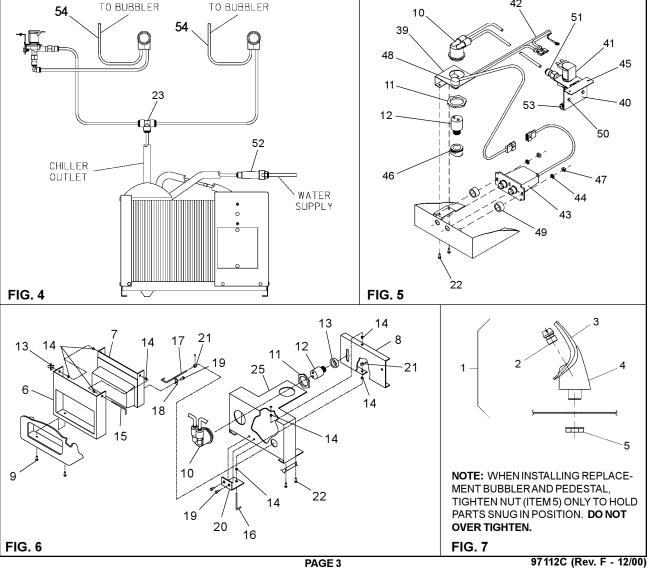

THE GROUNDING OF ELECTRICAL EQUIPMENT SUCH AS TELEPHONE, COMPUTERS, ETC. TO WATER LINES IS A COMMON PROCEDURE. THIS GROUNDING MAY BE IN THE BUILDING OR MAY OCCUR AWAY FROM THE BUILDING. THIS GROUNDING CAN CAUSE ELECTRICAL FEEDBACK INTO A FOUNTAIN, CREATING AN ELECTROLYSIS WHICH CAUSES A METALLIC TASTE OR AN INCREASE IN THE METAL CONTENT OF THE WATER. THIS CONDITION IS AVOIDABLE BY USING THE PROPER MATERIALS AS INDICATED. ANY DRAIN FITTINGS PROVIDED BY THE INSTALLER SHOULD BE MADE OF PLASTIC TO ELECTRICALLY ISOLATE THE FOUNTAIN FROM THE BUILDING PLUMBING SYSTEM.

#### INSTALLATION INSTRUCTIONS

- 1. Fasten mounting box into wall cutout using (6) screws or bolts (provided by others) through holes or knockouts provided on each side of the mounting box. See mounting box instructions and figure 3.
- 2. Mount back panel using (2) #8 x .50" (13mm) pan head screws and (2) large clips provided.
- 3. Secure fountain body through back panel to wall box using (4) 5/16" -18 x 1.75" (44mm) hex head bolts and (4) 5/16" 18 nuts provided. (Typical each fountain).
- Attach solenoid valve assembly to the mounting box. See figure 10.
- Place refrigeration package inside mounting box and connect water outlet tube on refrigeration package to water in tube on regulator holder (item 10) with tubing and fitting provided. See figure 4.
- 6. Water inlet is 3/8" O.D. and waste tube is 1-1/4" O.D. (Both provided) 1-1/4" O.D. slip trap (provided by others).
- 7. Connecting lines to be unplated copper and thoroughly flushed to remove all foreign matter before connecting to refrigeration package. The furnished strainer (Item 54) should be added to the supply line.
- 8. Connect refrigeration package to supply line with a shut off valve and install a 3/8" unplated copper water line between the valve and the cooler. Remove burrs from outside of water line. Insert water line straight into fittings until they reach a positive stop, approximately 3/4" (19mm). (See Fig. 1 and 2) DO NOT SOLDER TUBES INSERTED INTO THE STRAINER AS DAMAGE TO THE O-RINGS MAY RESULT.
- Electrical: Insure power supply is identical in voltage, hertz, and phase to that specified on the refrigeration package serial plate. Never wire compressor directly to the power supply.
- 10. Turn water supply on and check thoroughly for leaks.
- 11. Release air from tank by depressing push bar or activating sensor; a steady stream of water assures all air is removed.
- 12. Re-check for leaks.
- 13. Stream height is factory set at 35 PSI. If supply pressure varies greatly from this, turn adjustment screw on regulator (item 12). Clockwise adjustment will raise the stream height and counter-clockwise adjustment will lower stream height. For best adjustment, stream should hit basin approximately 6-1/2" from the bubbler.
- 14. Rotate fan blade on refrigeration package to insure proper clearance and free fan action.
- 15. Connect power supply.
- 16. Replace access panel and install grill using (4) #8 x 1.00" (25mm) PH screws and (4) small clips provided.

#### TROUBLE SHOOTING AND MAINTENANCE

- 1. Orifice Assy: Minerals deposits on orifice can cause water flow to spurt or not regulate. Mineral deposits may be removed from the orifice with a small round file not over 1/8" diameter or a small diameter wire. CAUTION: Do not file or cut orifice materials.
- 2. Stream Regulator: If orifice is free of material deposits regulate water flow according to instructions on page 3.
- 3. CAUTION: Cleaning of Bronzetone Models requires special care. Outer surfaces must be cleaned with a mild detergent or mixture of vinegar and water only, rinsed and wiped dry. Abrasive and acidic cleaners may eventually damage the Bronzetone finish.
- 4. **Sensor Control**: The sensor has a 2 second delay time. If sensor fails to operate valve mechanism or operates erratically, check the following:
  - a) Ensure there are no obstructions within a 40 inch radius from the front of
  - b) Check wire connections at the solenoid valve and at the sensor. CAUTION: Make sure unit is unplugged before checking any wiring.
  - c) Ensure proper operation of solenoid valve. If there is an audible clicking sound yet no water flows, look for an obstruction in the valve itself or elsewhere in the water supply line. WARNING: Do not expose sensor to direct sunlight.
- 5. Sensor Range Adjustment: The electronic sensor used in this fountain is factory pre-set for a "visual" range of 36 inches. If actual range varies greatly from this, or a different setting is desired, follow the range adjustment
  - a) Remove bottom cover of fountain.
  - b) Remove sensor by removing washers and nuts that secure sensor on studs.
  - c) Locate range adjustment screw between the red lenses of the sensor, then with a small tip screwdriver, rotate the range adjusting screw clockwise to increase range or counter-clockwise to decrease range. 1/4 turn of screw is equal to approximately 12 - 18 inches of range.
  - CAUTION: Complete range of sensor (24 48 inches) is only one turn of the adjusting screw.
  - d) Remount sensor on studs and replace bottom cover.
