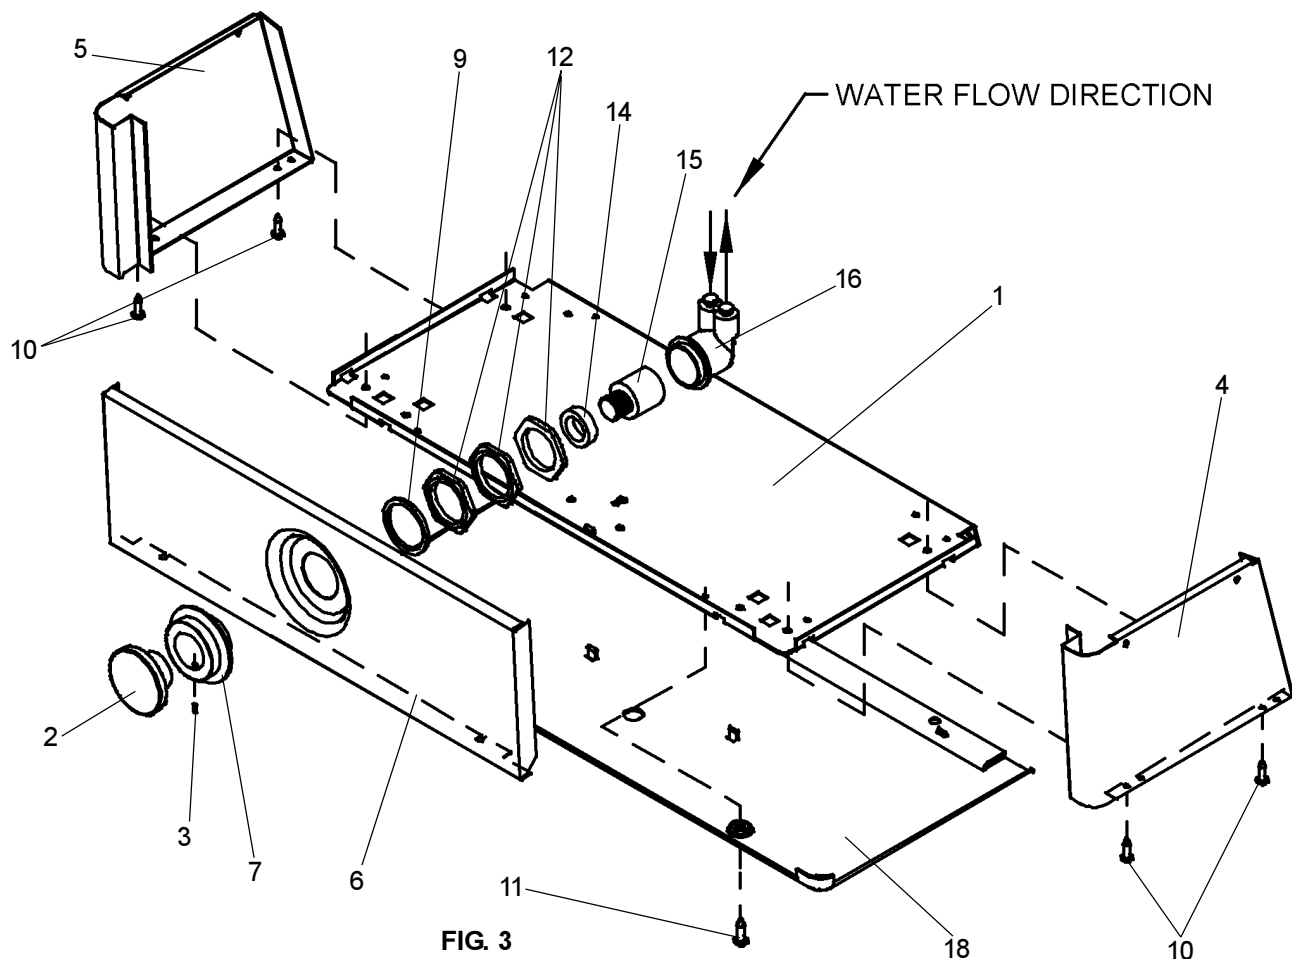

FIG. 3

**IMPORTANT**  
**ALL SERVICE TO BE PERFORMED BY AN AUTHORIZED SERVICE PERSON**

**HANGER BRACKETS & TRAP INSTALLATION**

- 1) Remove hanger bracket fastened to back of cooler by removing one (1) screw.
- 2) Mount the hanger bracket and trap as shown in Figure 2.

**NOTE:** Hanger Bracket **MUST** be supported securely. Add fixture support carrier if wall will not provide adequate support.

**IMPORTANT:**

- 7-3/4 in. (197mm) dimension from wall to centerline of trap must be maintained for proper fit.
- Anchor hanger securely to wall using all six (6) 1/4 in. dia. mounting holes.

- 3) Install straight valve for 3/8" O.D. tube.

**INSTALLATION OF COOLER**

- 4) Hang the cooler on the hanger bracket. Be certain the hanger bracket is engaged properly in the slots on the cooler back as shown in Figure 2.
- 5) Loosen the two (2) screws holding the lower front panel at the bottom of cooler base and two (2) screws at the top. Remove the front panel and set aside.
- 6) Connect water inlet line--See Note 4 of General Instructions.
- 7) Remove the slip nut and gasket from the trap and install them on the cooler waste line making sure that the end of the waste line fits into the trap. Assemble the slip nut and gasket to the trap and tighten securely.

**START UP**

Also See General Instructions

- 8) Stream height is factory set at 35 PSI. If supply pressure varies greatly from this, adjust screw on regulator (item 15), accessible by removing push button (Item 2, Fig. 3). CW adjustment will raise stream and CCW adjustment will lower stream. For best adjustment, stream should hit basin approximately 6-1/2" (165mm) from bubbler.

**PROTECT FROM HARD FREEZING**

- 9) If the ambient air temperature drops below 0° F, the cooler needs to be drained of all water by blowing out all water lines, evaporator (item 53), and the drain trap.

**WARNING!**

This unit is frost resistant down to 0° F with no wind. Prevailing winds can reduce the ability of the heater element to prevent light freezing. If the ambient air temperature will drop below 0° F, the cooler needs to be drained of all water by blowing out all water lines, evaporator (item 53), and the drain trap. A heater strip is used to heat the unit and will begin to cycle at 40° +/- 5° F. A check at this temperature will ensure the heater is working and the unit is resistant to light freezing.

**ALSO, MAKE SURE THERE ARE NO PLASTIC OR FLAMMABLE COMPONENTS DIRECTLY ABOVE THE HEATER STRIP.**
